

Offer May 2013

Kannegiesser[®]

Kannegiesser high-performance Ironerline

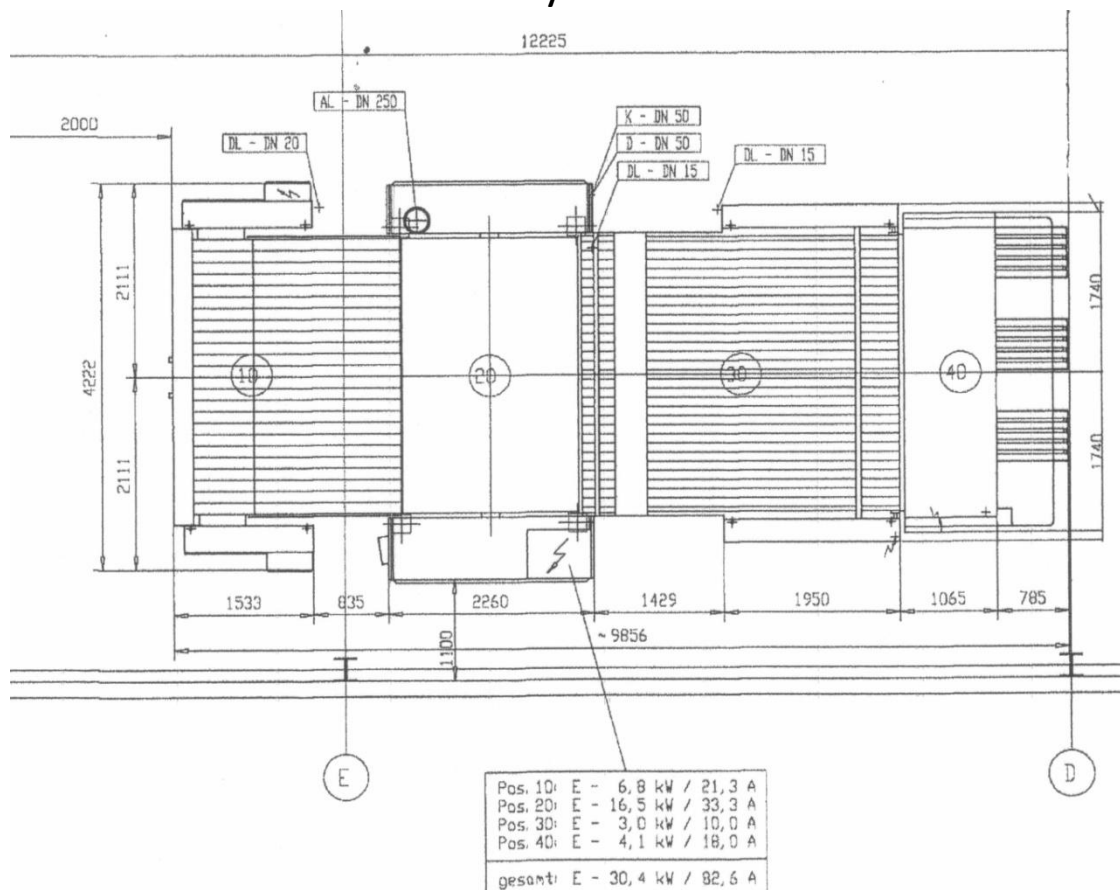

year: 2002, completely workshop-reconditioned in 2013!

3.000 mm working width

Consisting of feeder EMC, ironer HPM-G, folder RFL and
small-part folder MKF

Steam-heated

Layout

EMC-M-30-01-1/3

Feeding technology that can be used where flexibility and quality count. The EMC is the ideal feeding machine not only for operations where total production passes through one single ironer line or where part of the work comes in very small batch sizes, but also for larger laundries which require one ironer line for high quality items.

The sensitive spreading device is equipped with synchronously operating clamps to protect even the most delicate of fabrics when spreading and laying them perfectly parallel-edged on the Duo vacuum feed belts. Operation is possible by using one or two persons.

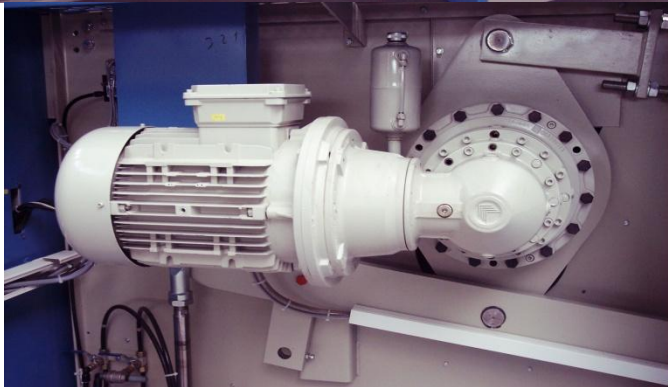

The multi-lane feeding of small items is assisted by the fast change-over from clamp-feeding to manual feeding.

HPM-G-30-1

High-quality finishing methods for table linen

- Single roll machine offering the capacity of a modern 2 roll 1300 ironer
- Reduction in operating costs
- No ironing tapes required, no tape marks
- Space saving
- Constant capacity independent of the clothing condition
- Excellent finish quality
- Minimum heating-up times – no heavy welded chests, the stainless steel heating band having a thickness of only 8 mm
- Reduction of tractive force on the textile – therefore reduction in re-feeding items
- rapid adjustment of different ironing temperatures

Heating band element design

- Highly dynamic load resistant stainless steel of excellent quality
- Laser welded sandwich structure
- Highly resilient design
- Narrow flow channels
- Operating steam pressure up to 16 bar
- Burst pressure tested to 123 bar
- Tangential work infeed wedge
- Capacity increase and constancy, independent of the clothing wear by the highly flexible adaptation to the roller diameter, e.g. clothing wear
- Roll diameter 1937 mm
- Stainless steel combination, therefore no corrosion

RFL30-1/2/3-3

The RFL can cater for a wider range of articles than any other folding system, whether napkins or aprons, theatre green items, heavy duvet covers or king-size polyester cotton sheets. It can produce a variety of fold formats while maintaining the same high quality.

MKF30/3

The wide variety of small pieces – from napkin to draw sheet – requires a high standard in precision folding, flexibility and performance for the small piece folding machine.

The following features of the model MKF will meet these requirements:

- Precise controlled blade folding with integrated automatic centralisation gives an exact folding quality for all formats.
- High versatility: According to the folding programme items can be cross-folded or simply stacked without being folded
- Stacking of the items in combination with the roll-off-blade and the lifting stacker which lowers according to the items.
- Control panel IBT with display showing all functions for operating and fault finding.
